PHP/Laravel Developer Assessment

Objective

Build a **Shipment Tracking Web Application** using the latest versions of PHP and Laravel.

Requirements

Page 1: Shipment List (`/shipments`)

Display a list of shipments with the following details:

Field	Description
Tracking Number	Unique shipment identifier
Receiver Name	Name of the receiver
Destination City	Delivery city
Status	Pending / In Transit / Delivered
Date	Shipment date

Features: - Pagination - Search by tracking number

Page 2: Shipment Details (`/shipments/{id}`)

- Show full shipment details (sender & receiver information)
- Display status timeline with timestamps

Database

Create these tables:

shipments

Column	Description
tracking_number	Unique tracking code
sender_name	Sender's name
sender_address	Sender's address
receiver_name	Receiver's name
receiver_address	Receiver's address
status	Pending / In Transit / Delivered

Column	Description
created_at	Timestamp

status_logs

Column	Description
shipment_id	Reference to shipment
status	Status at this point
location	Current location
created_at	Timestamp

Bonus

- Server-Side Rendering (SSR)

Submission

1. Push your code to a **public GitHub repository**
2. Include a **README** with setup instructions

Good luck!
